AMENDMENTS TO THE CLAIMS

1. (Currently amended) A multilayered transparent biaxially oriented polypropylene film made of a base layer and at least one first cover layer, characterized in that the base layer contains a hydrocarbon resin and the cover layer contains a polydialkyl siloxane having a viscosity of at least 200,000 mm²/second determined according to DIN 53018 and/or DIN 53019 and the first cover layer has a cold sealing adhesive coating on its outer surface.

2. (Original) The polypropylene film according to Claim 1, characterized in that the base layer contains an isotactic polypropylene having a melting point of 155 - 165°C.

3. (Previously Presented) The polypropylene film according to Claim 1, characterized in that the base layer contains the hydrocarbon resin in a quantity of 5 to 20 weight-percent, in relation to the weight of the base layer.

4. (Previously Presented) The polypropylene film according to Claim 1, characterized in that the hydrocarbon resin contains a non-hydrogenated styrene polymer, a methylstyrene-styrene copolymer, a pentadiene polymer, a pentadiene and cyclopentadiene copolymer, an α-pinene polymer, β-pinene polymer, colophony or colophony derivatives or terpene polymers and hydrogenated compounds thereof, or hydrated α-methylstyrene-vinyl toluene copolymer or mixtures thereof.

5. (Previously Presented) The polypropylene film according to Claim 1, characterized in that the hydrocarbon resin has a softening point of 100 to 160°C.

6. (Previously Presented) The polypropylene film according to Claim 1, characterized in that the first cover layer contains the polydialkyl siloxane in a quantity of 0.5 to 3 weight-percent, in relation to the weight of the cover layer.

7. (Previously Presented) The polypropylene film according to Claim 1, characterized in that the polydialkyl siloxane has a viscosity of 250,000 to 500,000 mm²/second.

8. (Previously Presented) The polypropylene film according to Claim 1, characterized in that the first cover layer is synthesized from isotactic propylene homopolymers, propylene copolymers, or propylene terpolymers or mixtures of these polymers, the propylene copolymers

and terpolymers having a propylene content of at least 80 weight-percent in relation to the polymer.

9. (Previously Presented) The polypropylene film according to Claim 1, characterized in that the first cover layer contains 0.1 to 2 weight-percent antiblocking agent.

10. (Previously Presented) The polypropylene film according to Claim 1, characterized in that the first cover layer comprises propylene polymers, polydialkyl siloxane, and antiblocking agent.

11. (Previously Presented) The polypropylene film according to Claim 1, characterized in that the surface of the first cover layer is pretreated using corona, plasma, or flame.

12. (Previously Presented) The polypropylene film according to Claim 1, characterized in that a second cover layer made of polyolefinic polymers is applied to the diametrically opposite surface of the base layer.

13. (Previously Presented) The polypropylene film according to Claim 1, characterized in that a release layer is applied to the surface diametrically opposite the first cover layer as the outer layer, whose surface has a low adhesion in relation to cold sealing coatings.

14. (Currently Amended) The polypropylene film according to ~~Claim 1~~ Claim 13, characterized in that the release layer is a release lacquer, a release film, or a second coextruded release cover layer.

15. (Previously Presented) The polypropylene film according to Claim 1, characterized in that the base layer contains an antistatic agent.

16. (Previously Presented) The polypropylene film according to Claim 1, characterized in that all layers of the film contain neutralization agents and stabilizers.

17. (Currently Amended) A method for manufacturing ~~a polypropylene~~ the polypropylene film according to Claim 1, ~~characterized in that~~ which comprises performing in a gravure printing method the coating of the biaxially oriented film with the cold sealing adhesive ~~is performed in the gravure printing method~~.

18. (Previously Presented) The polypropylene film according to Claim 15, wherein said antistatic agent is tertiary aliphatic amine.
